

There is great potential for crops and by-products of animal husbandry to help reduce the environmental impact of construction. Their use in construction can also contribute to the economic viability of agriculture in Europe and worldwide by adding value to existing crops, stimulating development of new crops and providing a market for waste materials. The handbook focuses on products that are available now and shows how they can be used successfully in construction projects. It also covers products that are being developed or are likely to be available soon. Environmental benefits from using crop-based materials include better air quality, natural management of moisture levels and reduced incidence of allergic reactions. This publication is intended for the widest range of decision-makers and participants in the construction sector, including those who commission, design and build projects. It will be of particular interest to anyone with an interest in reducing the environmental impact of the construction process.

Sabila. Salud, Belleza y Vitalidad, The Pembrokeshire Coast National Park (David and Charles Britain), The Five Love Languages of Teenagers (Playaway Adult Nonfiction), The Yuquot Whalers Shrine, Kinderarmut: Einfuhrendes Handbuch fur Forschung und soziale Praxis (German Edition), Mexicos South Pacific Coast, The Kemp Town Branch Line, Capacity Building Framework: A Values-based Programming Guide, The Insurgents: David Petraeus and the Plot to Change the American Way of War, Gaza!: The Fallout From Premeditated Barbarianism,

The use of non-food crops in construction has a long history. In addition to the use of wood as a mainstay in building housing, until recently the.
