Radioactive waste. High-level waste. Other waste. Radioactive gases and effluents. Risk of cancer. Comparison to coal-fired generation. Contrast of radioactive accident emissions with industrial emissions. Waste heat. Fukushima disaster. Power plant emission - Greenhouse gas emissions - Environmental effects of.

But nuclear power comes with plenty of other risks that aren't so obvious: the hazards of uranium mining, the fouled water, and the radioactive. Increased Long-Term Cancer Risks. In the region around Chernobyl, more than 5 million people may have been exposed to excess radiation, mainly through contamination by iodine and cesium isotopes. Although exposure to nuclear-reactor fallout does not cause acute illness, it may elevate long-term cancer risks.

Still, while experts say Fukushima is likely to have some impact on nuclear power going forward, it is unlikely to be as disruptive for the industry.

The nuclear industry seeks to revitalize itself by manipulating the public's concerns about global warming and energy insecurity to promote.

Nuclear power has experienced a resurgence of interest and the dramatically- altered landscape of energy politics has given reasonable cause to believe that a .

Nuclear energy has no place in a safe, clean, sustainable future. Nuclear energy is both expensive and dangerous, and just because nuclear pollution is.

NUCLEAR ENERGY. Nuclear reactor hazards: ongoing dangers of operating nuclear technology in the 21st Century. Helmut Hirsch, Oda Becker; Mycle.

An uncontrolled nuclear reaction in a nuclear reactor could result in widespread contamination of air and water. The risk of this happening at.

Truth: We are surrounded by naturally occurring radiation. Only % of the average American's yearly radiation dose comes from nuclear power; times. Safety of Nuclear Power Reactors. The risks from western nuclear power plants, in terms of the consequences of an accident or terrorist attack, are minimal. The radioactive waste coming from nuclear power plants is a great threat to Mother Nature and humans. The devastating effects of Chernobyl disaster still linger. Pros and cons of nuclear energy: As of today, nuclear energy is considered as needed to protect mother earth from the devastating effects of nuclear energy.
