

Although, your health condition may impact your everyday life, do not let it define who you are. SIMCOR (simvastatin) tablet is used together with diet, weight-loss, and exercise to reduce the risk of heart attack and stroke and to decrease the chance that heart surgery will be needed in people who have heart disease or who are at risk of developing heart disease. SIMCOR is also used to decrease the amount of fatty substances such as low-density lipoprotein (LDL) cholesterol (bad cholesterol) and triglycerides in the blood and to increase the amount of high-density lipoprotein (HDL) cholesterol (good cholesterol) in the blood. SIMCOR may also be used to decrease the amount of cholesterol and other fatty substances in the blood in children and teenagers 10 to 17 years of age who have familial heterozygous hypercholesterolemia (an inherited condition in which cholesterol cannot be removed from the body normally). Simvastatin is in a class of medications called HMG-CoA reductase inhibitors (statins). It works by slowing the production of cholesterol in the body to decrease the amount of cholesterol that may build up on the walls of the arteries and block blood flow to the heart, brain, and other parts of the body. Accumulation of cholesterol and fats along the walls of your arteries (a process known as atherosclerosis) decreases blood flow and, therefore, the oxygen supply to your heart, brain, and other parts of your body. Lowering your blood level of cholesterol and fats with SIMCOR has been shown to prevent heart disease, angina (chest pain), strokes, and heart attacks. Thanks and may you have a good understanding about this drug SIMCOR. You may want to share this book with your family and friends who may be in need of help and would want to use this medicine. Take care, and as always, be well!

Drama Menu: Theatre Games in Three Courses, Farthest North: Being the Record of a Voyage of Exploration of the Ship Fram 1893-96 and of a Fifteen Months Sleigh Journey by Dr. Nansen and Lieut.
